Types of Lamp Fittings

The 'cap' or 'base' provides an electrical connection to the lamp and ensures the lamp is held in the correct position. It is essential to know the cap type to identify the lamp. Below we have listed the most popular fittings.

LARGE BAYONET

Bayonet Caps

Bayonet caps are mainly used in Great Britain and are distinctive by their 'push and twist' action to install.

Below shows the most popular caps and the less common types that are also available.

SMALL BAYONET

- Bayonet Cap (BC) 22mm Diameter
- Small Bayonet Cap 15mm Diameter
- Small Bayonet Cap 15mm Diameter
- Miniature Bayonet Cap 9mm Diameter

LARGE SCREW

Edison Screw Cap

Edison Screw Caps take their name from the inventor of the light bulb Thomas Edison and are universally used for a range of applications.

Below shows the most popular caps and the less common types that are also available.

SMALL SCREW

- E5 5mm Small decorative applications and indicator buttons,
- E10 10mm Often found in industrial applications,
- E12 12mm An American cap but often used in Europe,
- E14 14mm Commonly found in a range of domestic applications,
- E27 27mm This is the most popular Edison Screw cap,
- E40 40mm Commonly used in commercial 250w+ applications,
