

LED STRIPS

At Iberian Lighting we offer a wide range of LED strips to suit interior and exterior use. Our in house expertise are here to help provide wholesalers, architects, lighting designers as well as the general public

All of our LED strips are dimmable and can come installed with drivers and control gears.

We offer an array of colour LED strips to complement our hand crafted lamp shades. RGBW (red, green, blue, white) colour strips are arranged on the same PCB board allowing users to switch from a clean single colour to a colour changing RGB on the same strip.

LED strips are also great at illuminating kitchen counters, staircases, cove or arch features and creating a relaxed mood lighting which can be hidden behind cornices and cabinets or bookshelves, to name a few.

At Iberian Lighting we offer a range of zone controllers, allowing LED strip intrusion into almost any area.

Colour Controllers allow users to control zones of LED strip. We offer LED Single Colour Controllers, Tunable White Colour Controllers and RGB & RGBW Controllers. You also have the option of WI-FI connectivity when paired with our WI-FI transmitter, thus allowing simultaneous control via smart phones and tablet devices.

LED Lights last up to six times longer than other lighting types, reducing the requirement for replacements at the same time as reducing your carbon footprint.. LED lights also dont contain toxic elements.

LED lighting is more energy efficient than any other known lighting technology. LED products are significantly cheaper to run compared to standard lighting technologies

LEDs are highly efficient for white and colored light applications. All of our LED Lights have the ability to be dimmed and to provide color control are other benefits of LED lights.
